

Student Health & Counseling Center

Health and Immunization Requirements

2025-2026

Readmitted Students

Welcome back to Dordt University! We're glad you're back.

Readmitted students are asked to update the following items in their Online Student Health Portal (OSHP) accessed through your Dordt [Student Account Checklist](#) . **Please complete this information by July 1 for fall semester, and January 2, for spring semester.** Health and Immunization requirements must be met prior to enrolling for a second semester.

1. **Health History:** Please update the self-reported Health History. This information provides Student Health and Counseling with information about your health status and past medical history and enables us to better meet your health care needs while you are a student. All medical information is confidential and will only be shared if you provide authorization for us to do so. The Health History *should be completed by the student, with assistance from a parent if necessary.*
2. **Tuberculosis Screening Questionnaire:** We ask all readmitted students to complete the screening for risk factors of tuberculosis (TB) exposure using this questionnaire. Screening and targeted testing for TB is a key strategy for controlling and preventing infection on college and university campuses. For basic facts on tuberculosis, visit the [Center for Disease Control and Prevention's tuberculosis page](#). It is recommended by the CDC that any incoming student who has traveled or lived internationally in areas of high risk for tuberculosis, be [tested for this illness](#).
3. **Privacy Policy and Authorization for Use:** This document provides information about Student Health and Counseling's privacy policy and authorization to receive services through us.
4. **Immunizations:** Check the "Immunization" section of the portal to be sure that you have provided us with the dates of 2 MMR vaccines and a copy of your immunization record.
